

GOURAV KAR

Java Backend Developer | Spring Boot | Python & Machine Learning

+91-8016105008 | gouravkar0072@gmail.com | linkedin.com/in/gouravkar | github.com/GouravKar

PROFESSIONAL SUMMARY

Computer Science Engineering graduate with hands-on experience in Java, Spring Boot, and Python backend development, building RESTful APIs and full-stack applications. Skilled in applying Machine Learning (Scikit-learn, Pandas) to develop data-driven, AI-integrated web applications, with experience deploying full-stack solutions to the cloud. Experienced with Agile and Scrum methodologies through an internship at Acceleratron, with a strong foundation in REST API design and system design.

EDUCATION

B.Tech in Computer Science Engineering

August 2023 – July 2026

Bengal Institute of Technology | CGPA: 6.75

Diploma in Computer Science Engineering

June 2021 – August 2023

Raghunathpur Government Polytechnic | 78.6%

10th Grade – WBBSE

February 2020

Kamalpur Netaji High School | 65%

TECHNICAL SKILLS

Languages: Java, Python

Backend & Frameworks: Spring Boot, FastAPI, Pydantic, REST APIs, Swagger, Microservices

Machine Learning: Scikit-learn, Pandas, NumPy, TensorFlow, Keras, Feature Engineering, Model Deployment

Frontend & Visualization: Streamlit, Plotly

AI Integration: Google Gemini API

Databases: SQL Server

Cloud & Deployment: Render, GitHub Pages, Cloud Deployment

DevOps & Tools: Docker, Git, GitHub, SourceTree, Jira, Confluence

Methodologies: Agile, Scrum, System Design, Architecture Planning, Estimation

Other: Gmail SMTP Automation, Windows OS Scripting

WORK EXPERIENCE

Backend Developer Intern – Acceleratron

February 2024 – June 2026

- Developed and maintained backend systems and REST APIs using Java and Spring Boot
- Participated in Agile sprints and Scrum ceremonies, contributing to planning and estimation
- Received award for team management contributions during Acceleratron engagement
- Collaborated on ERP portal development for the garment industry, managing inventory, sales, and transactions

PROJECTS

AI-Based Maternal Health & Preeclampsia Risk Prediction System

2026

Python, Scikit-learn, Pandas, NumPy, Streamlit, Plotly, Google Gemini API, Render

- Built a full-stack machine learning web application with a dual-stage prediction pipeline that assesses maternal health risk and, for high-risk cases, escalates to a dedicated preeclampsia risk model
- Engineered the end-to-end ML workflow — data preprocessing, feature engineering, model training, and evaluation — using Scikit-learn, Pandas, and NumPy to deliver real-time risk predictions

- Developed an interactive Streamlit dashboard with Plotly visualizations to present risk analysis, prediction results, and trends through charts and graphs in a responsive, user-friendly interface
- Integrated the Google Gemini API to power an AI health assistant, providing users with personalized, AI-assisted guidance based on their prediction results
- Implemented automated PDF report generation so users can download a summary of their risk assessment and recommendations
- Deployed the full-stack application on Render with a companion landing page on GitHub Pages, delivering an end-to-end cloud-hosted healthcare tool

ERP Portal – Garment Industry ERP System

June 2025 – August 2025

Backend Developer | Spring Boot, SQL Server

- Built a full ERP system tailored for the garment industry enabling efficient management of inventory, sales, and transactions
- Implemented real-time stock tracking and accurate transaction record management
- Designed for both stakeholder and client access, delivering a seamless user experience

A2Z Fast Food – Terminal-Based Food Ordering System

May 2025 – June 2025

Backend Developer | Python, FastAPI, SQL Server

- Built a terminal-based food ordering application with menu management, order placement, and automated billing
- Developed RESTful APIs for authentication, admin controls, and order workflows
- Integrated SQL Server for data management and added sales analytics to track top items and daily reports

Login Alert – Windows Security Notification Script

September 2025 – November 2025

Python, Gmail SMTP, Windows OS

- Created a Python script that captures Windows login/unlock events and sends real-time email alerts via Gmail SMTP
- Implemented accurate user and timestamp logging for personal monitoring and security purposes

CERTIFICATIONS & TRAINING

- AWS Academy Cloud Foundation
- Python Programming with Application on Robotics
- SAP S/4HANA Development Certification
- Java Training
- Spring Boot Training
- Artificial Intelligence by IBM
